

Week 1 – 1:

--Coding-C-Language Features-Optional.

ROLL NO.:240801179

Name: Lohith P Shetty

<b>Status</b>	Finished
<b>Started</b>	Monday, 23 December 2024, 5:33 PM
<b>Completed</b>	Sunday, 10 November 2024, 12:33 PM
<b>Duration</b>	43 days 4 hours

Q1) This is a simple challenge to help you practice printing to stdout.

We're starting out by printing the most famous computing phrase of all time! In the editor below, use either `printf` or `cout` to print the string `Hello, World!` to stdout.

Input Format

You do not need to read any input in this challenge.

Output Format

Print `Hello, World!` to stdout.

Sample Output 1

Hello, World!

Code:

**Answer:** (penalty regime: 0 %)

```
1 #include <stdio.h>
2 int main(){
3     printf("Hello, World!\n");
4     return 0;
5 }
```

OUTPUT:

	Expected	Got	
✓	Hello, World!	Hello, World!	✓

Passed all tests! ✓

Q2) This challenge will help you to learn how to take a character, a string and a sentence as input in C. To take a single character `ch` as input, you can use `scanf("%c", &ch);` and `printf("%c", ch)` writes a character specified by the argument `char` to `stdout`: `char ch; scanf("%c", &ch); printf("%c", ch);` This piece of code prints the character `ch`. Task You have to print the character, `ch`.

Input Format Take a character, ch as input.

Output Format Print the character, ch

Code:

```
1 #include <stdio.h>
2 int main(){
3     char ch;
4     scanf("%c",&ch);
5     printf("%c",ch);
6     return 0;
7 }
```

OUTPUT:

	Input	Expected	Got	
✓	C	C	C	✓

Passed all tests! ✓

### Q3) Problem Statement:

The fundamental data types in c are int, float and char. Today, we're discussing int and float data types.

The printf() function prints the given statement to the console. The syntax is printf("format string",argument\_list);. In the function, if we are using an integer, character, string or float as argument, then in the format string we have to write %d (integer), %c (character), %s (string), %f (float) respectively.

The scanf() function reads the input data from the console. The syntax is scanf("format string",argument\_list);. For ex: The scanf("%d",&number) statement reads integer number from the console and stores the given value in variable number.

To input two integers separated by a space on a single line, the command is scanf("%d %d", &n, &m), where n and m are the two integers.

### Task

Your task is to take two numbers of int data type, two numbers of float data type as input and output their sum:

1. Declare 4 variables: two of type int and two of type float.
2. Read 2 lines of input from stdin (according to the sequence given in the 'Input Format'

section below) and initialize your 4 variables.

3. Use the + and - operator to perform the following operations:

- Print the sum and difference of two int variable on a new line.
- Print the sum and difference of two float variable rounded to one decimal place on a new line.

Input Format

The first line contains two integers. The second line contains two floating point numbers.

Constraints:  $1 \leq \text{integer variables} \leq 104$ ,  $1 \leq \text{float variables} \leq 104$

Output Format

Print the sum and difference of both integers separated by a space on the first line, and the sum and difference of both float (scaled to 1 decimal place) separated by a space on the second line.

Sample Input

10 4

4.0 2.0

Sample Output

14 6

6.0 2.0

Code:

```

1 #include <stdio.h>
2 int main()
3 {
4     int int1,int2;
5     float float1,float2;
6     scanf("%d %d",&int1,&int2);
7     scanf("%f %f",&float1,&float2);
8     printf("%d %d\n",int1+int2,int1-int2);
9     printf("%.1f %.1f\n",float1+float2,float1-float2);
10    return 0;
11 }

```

OUTPUT:

	Input	Expected	Got	
✓	10 4 4.0 2.0	14 6 6.0 2.0	14 6 6.0 2.0	✓
✓	20 8 8.0 4.0	28 12 12.0 4.0	28 12 12.0 4.0	✓

Passed all tests! ✓
